# Web-Based Preorder and Freshness Management System for Home-Based Entrepreneurs

**Wrap & Bowl Kuch · Kuching, Sarawak**

Christopher Hansen · 2402081406

Supervisor: Ms. Nur Elana Binti Mohd Saferinor

# Problem statement

Preorder details can be scattered across messages.

Ingredient deadlines need to be considered when accepting an order.

The kitchen needs its own identity, order records and sales information.

# Project objectives

1. To design and develop a web application that supports flexible date-based food preordering and scheduling for home-based food entrepreneurs.

2. To implement a food stock freshness monitoring feature based on ingredient shelf life and storage duration.

3. To develop a personalised single-vendor storefront module that allows sellers to strengthen branding without direct competitor distraction.

4. To implement a sales analytics dashboard that supports data-driven business decision-making for home-based food operators.

5. To develop a menu recommendation system that reduces customer decision fatigue and improves purchase conversion rates.

# Client requirements

Morning delivery, collection and area-based fees

Ingredient batches and packaging quantities

Receipt uploads, order printing and simple handover records

Banking and delivery arrangements remain outside the website.

# Order processing

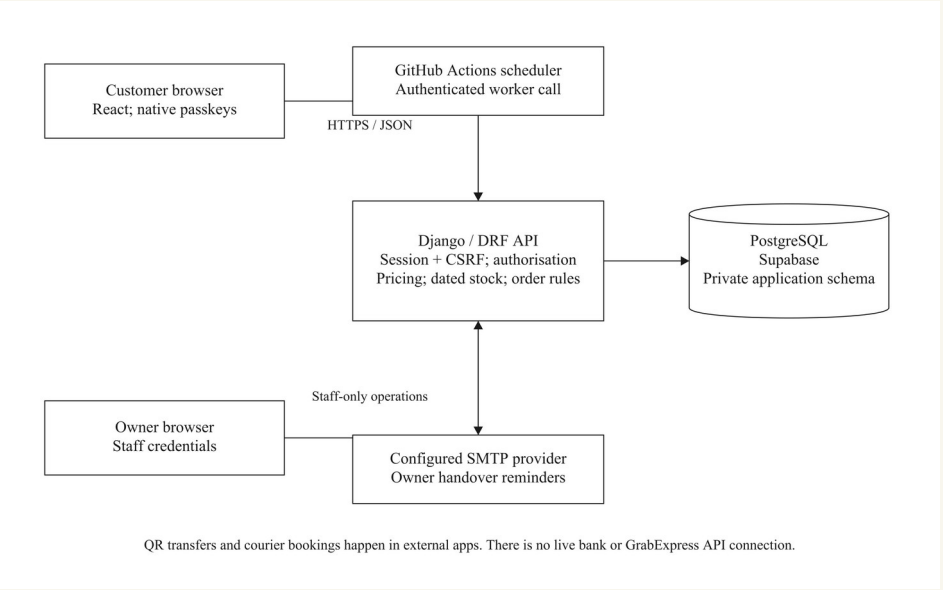

1 Confirm the date, total and usable stock

2 Save the accepted order details

3 Deduct ingredients and packaging

4 Review payment evidence

5 Confirm the actual food handover

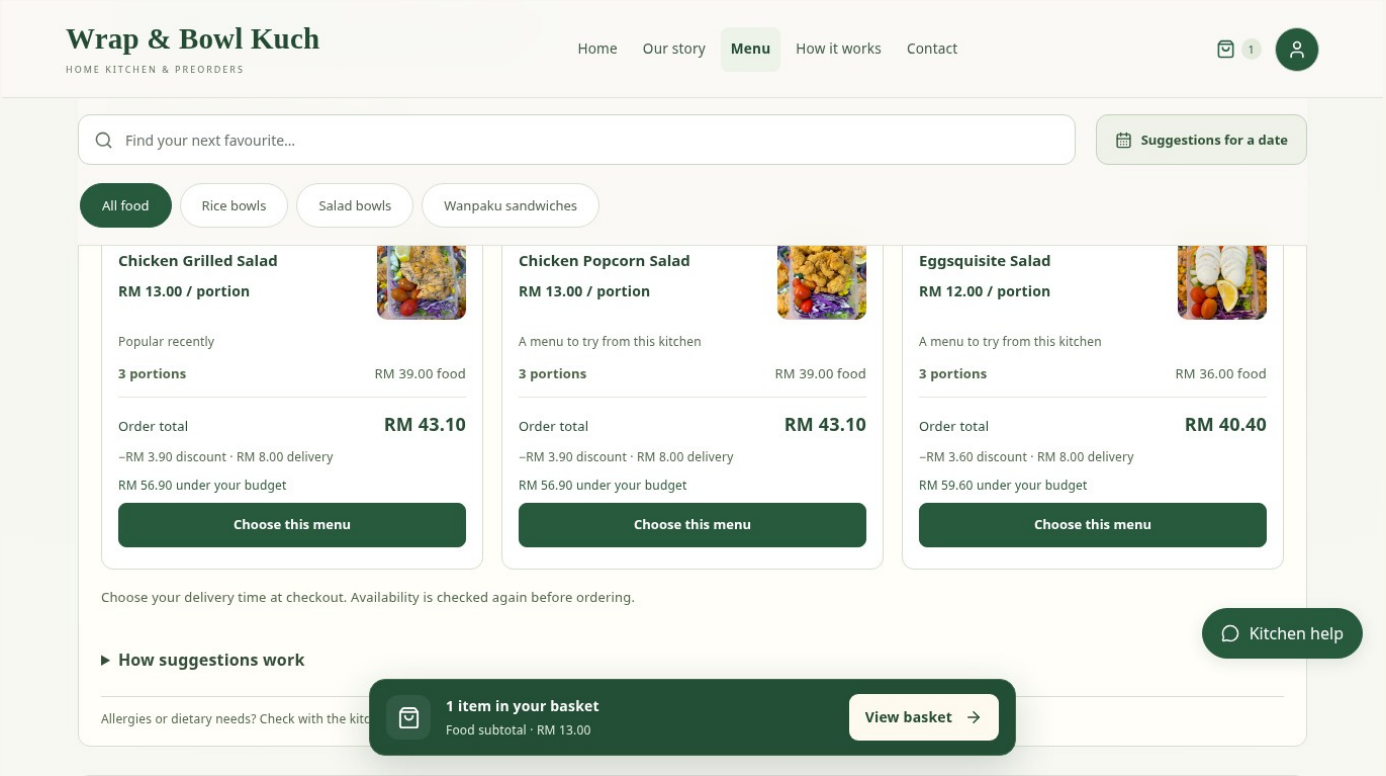

**Order placement and stock deduction share one transaction.**

# Menu choices

Browse one branded kitchen

Request suggestions for a date, quantity and budget

Compare a mix of menus or one menu repeated

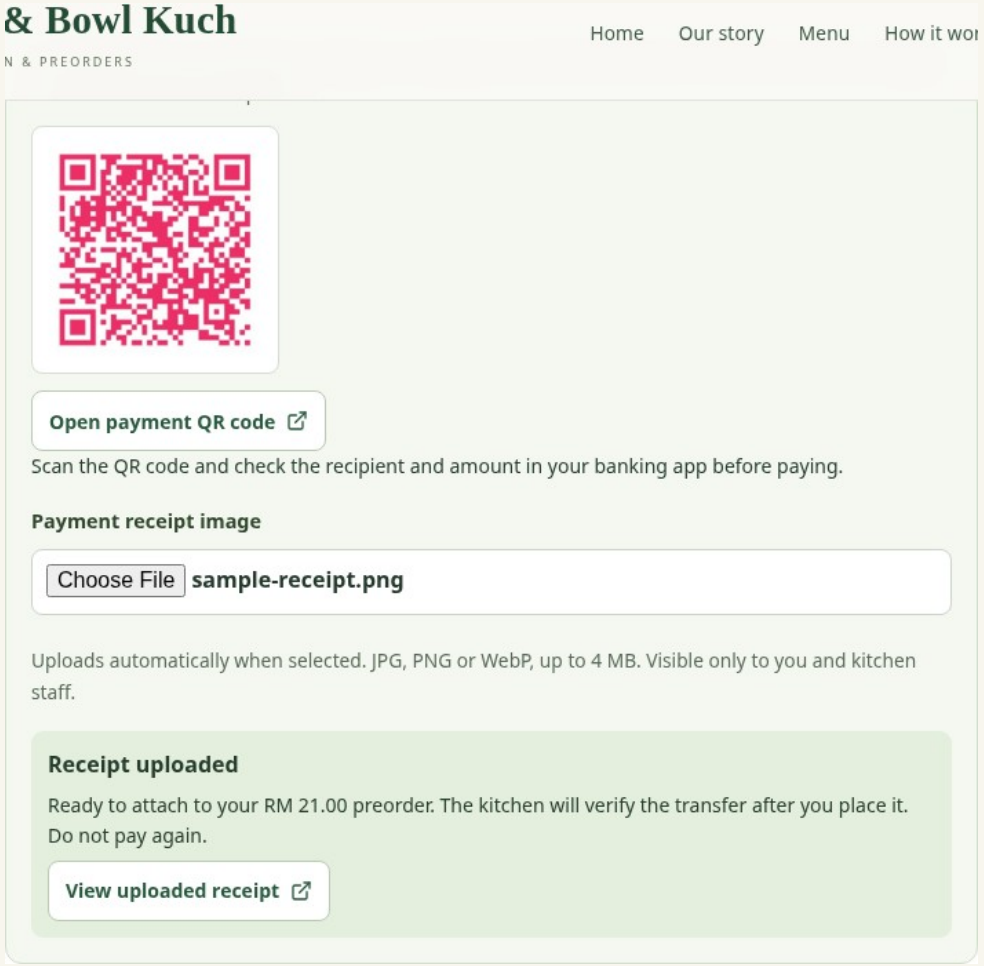

Controlled example records

# Checkout and account access

Review the basket before signing in

Choose an offered date, morning time and delivery area

Confirm the total and upload payment evidence

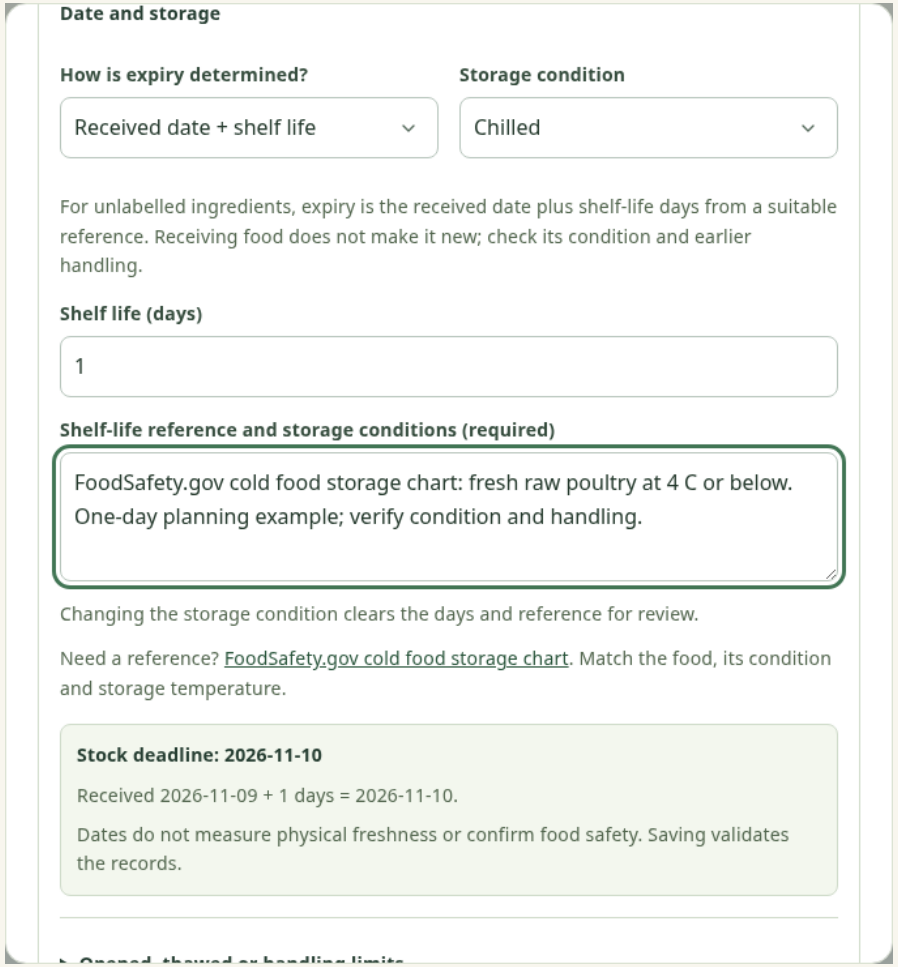

Controlled example records

# Ingredient dates and packaging

Printed expiry or documented shelf life

Received-date and manufacture-date calculations

Earlier limits and held batches affect usable stock

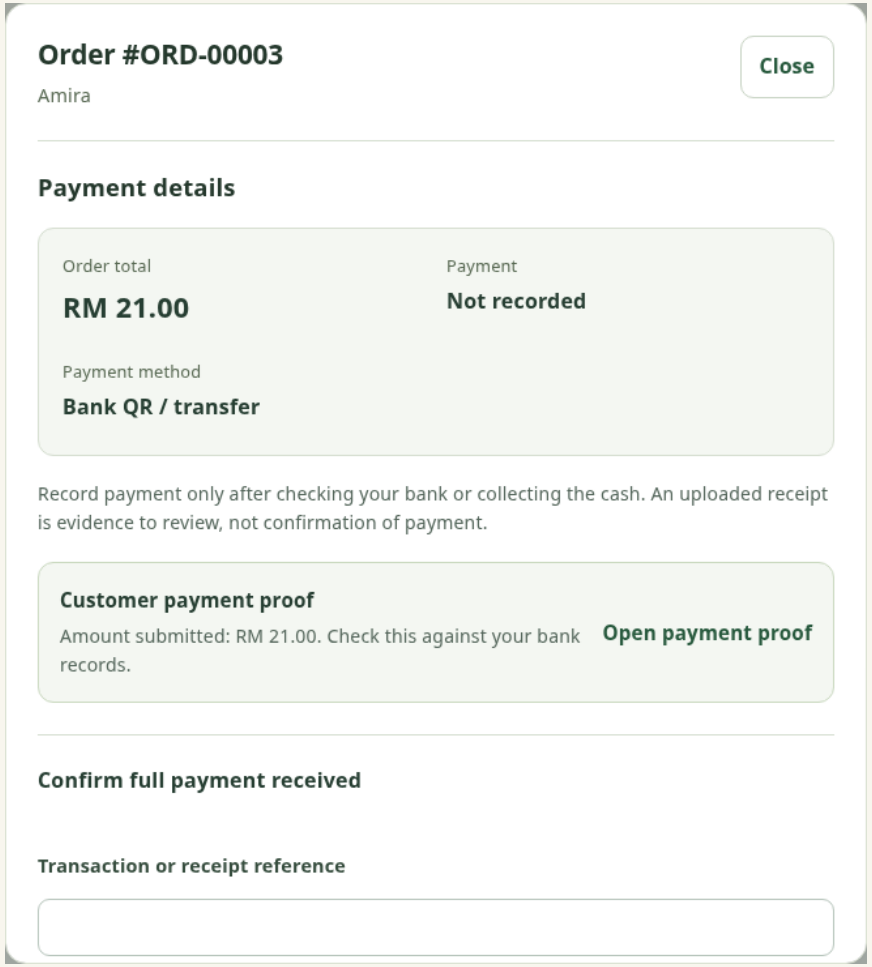

Controlled example records

# Payment and food receipt

Verify the bank transfer or collected cash before recording payment

Confirm food received only after actual handover

Review cancellation and eligible time changes separately

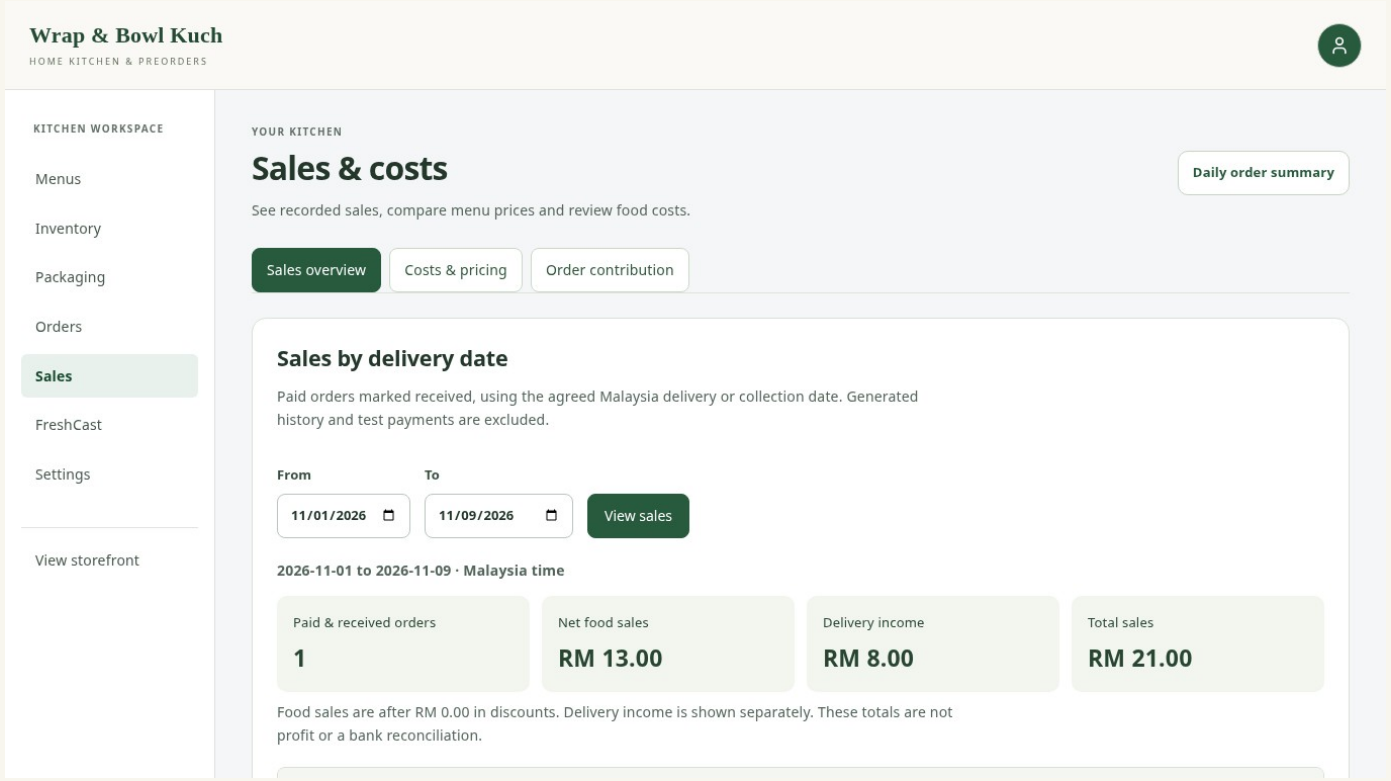

Controlled example records

# Daily orders and sales

Daily summaries and Print all support fulfilment

Sales views follow their stated payment and receipt rules

Unknown costs remain incomplete

Controlled example records

# Verification and evaluation

**1,049**

**backend tests passed**

Functional passes do not measure satisfaction or purchase conversion.

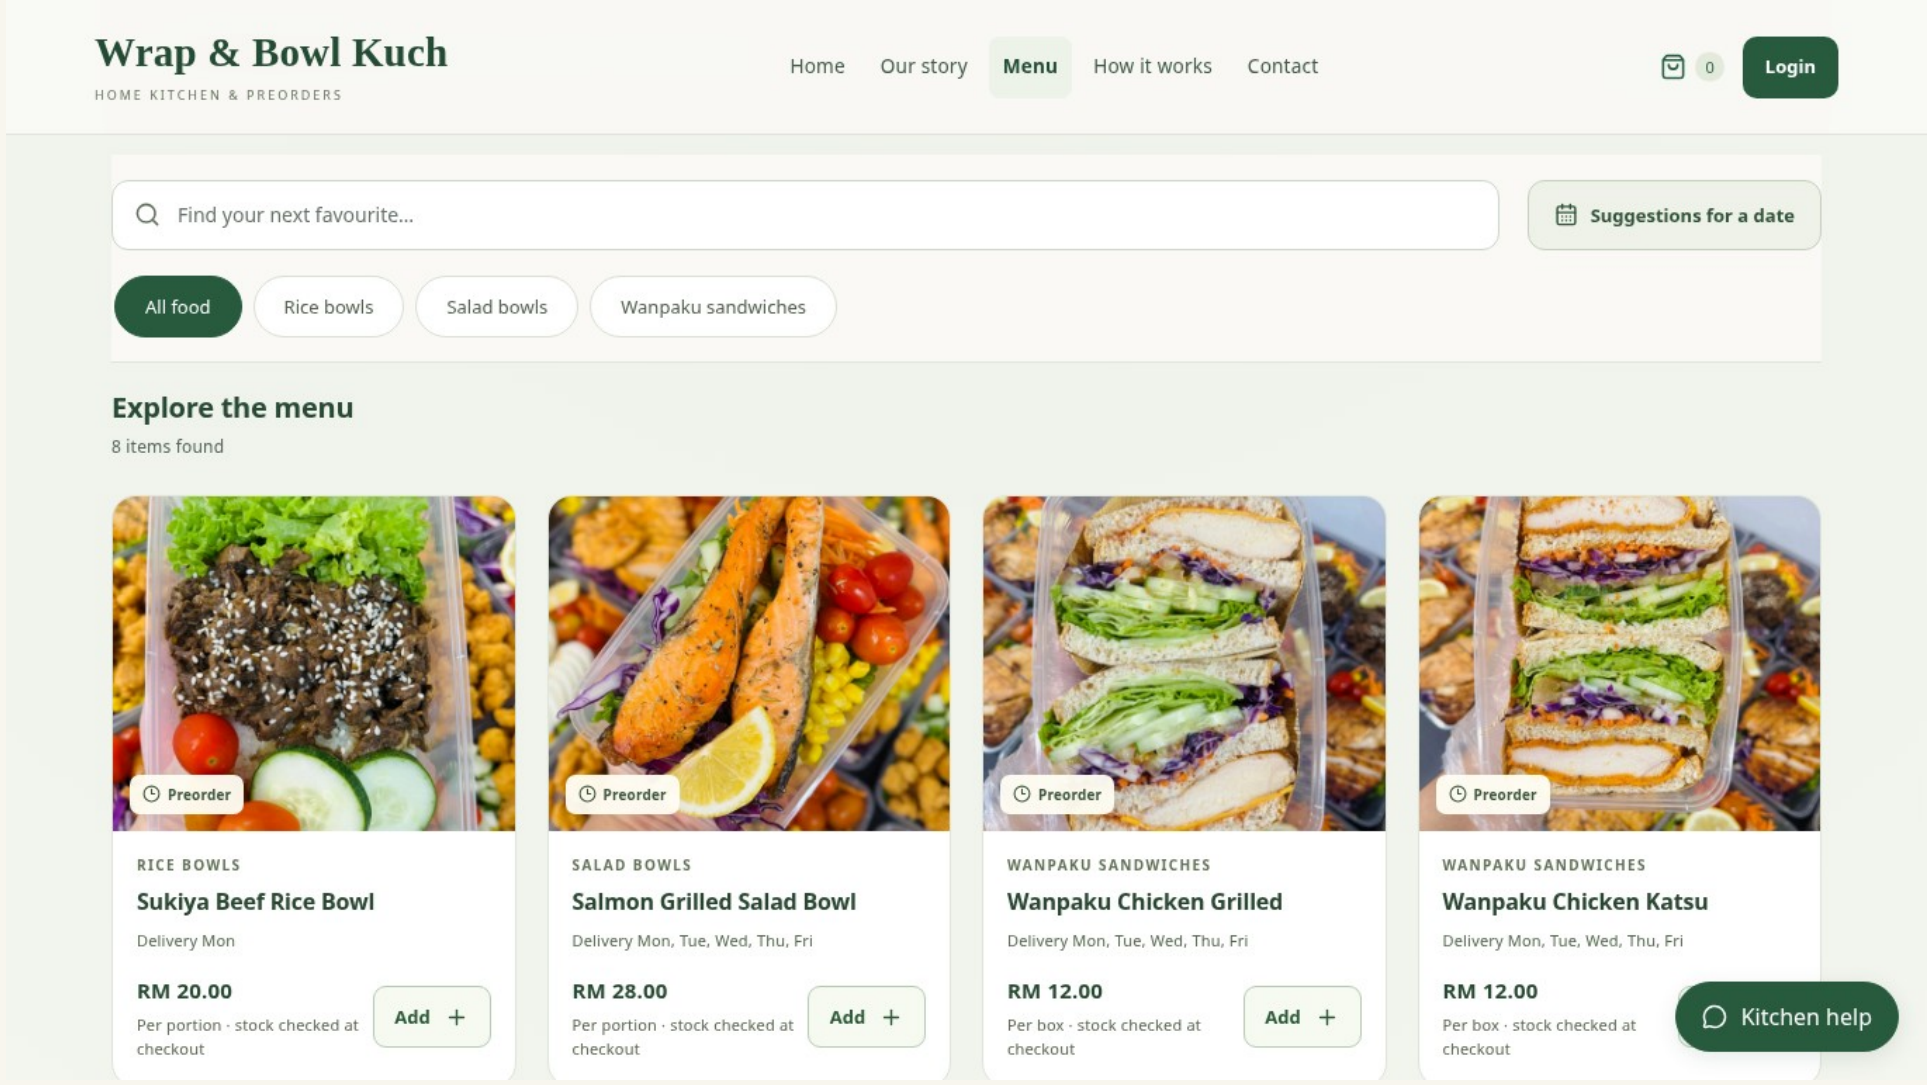

# Contribution and limits

A connected ordering and record-keeping workflow for one kitchen

Recorded dates support planning; payment and handover need real evidence

User and business outcomes still require evaluation

# System demonstration

**2 minutes**

Customer preorder to kitchen records
