IT PROJECT 2 | SARAWAK TUN OPENG UNIVERSITY OF TECHNOLOGY

A connected workflow for home-kitchen preorders.

Web-Based Preorder and Freshness Management System for Home-Based Entrepreneurs

Christopher Hansen · 2402081406 | Supervisor: Ms. Nur Elana Binti Mohd Saferinor

CASE STUDY / WRAP & BOWL KUCH, KUCHING

01 Browse food → **02** Choose date + area → **03** Validate price + stock → **04** Save order + deduct → **05** Review and report

WHY THIS PROJECT?

- Preorder dates can remain scattered across messages.
- Ingredient shelf-life records sit outside the ordering tools reviewed.
- A home kitchen needs its own identity and useful decision information.

Motivation: Chapter 1 problem statements and Chapter 2 platform/literature review.

FIVE ORIGINAL OBJECTIVES

1. To design and develop a web application that supports flexible date-based food preordering and scheduling for home-based food entrepreneurs.

2. To implement a food stock freshness monitoring feature based on ingredient shelf life and storage duration.

3. To develop a personalised single-vendor storefront module that allows sellers to strengthen branding without direct competitor distraction.

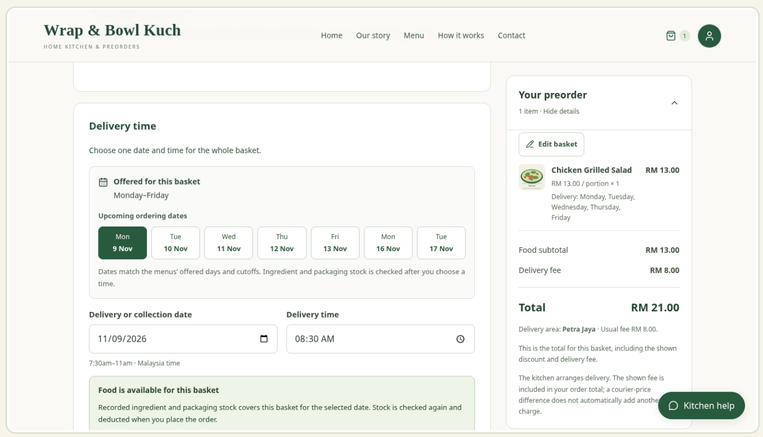

4. To implement a sales analytics dashboard that supports data-driven business decision-making for home-based food operators.

5. To develop a menu recommendation system that reduces customer decision fatigue and improves purchase conversion rates.

CLIENT-LED CHANGES

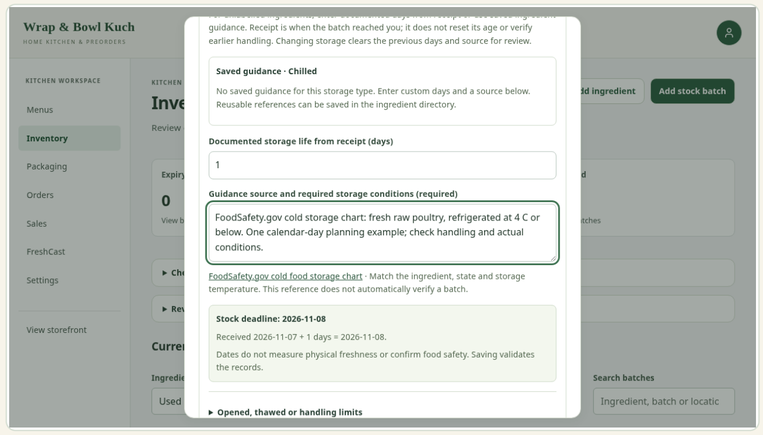

Morning handover · area fees · packaging stock · payment proof · simpler order receipt.

TWO FEATURE STORIES

1 CUSTOMER PREORDER

Clear date choices and totals. Placement rechecks the basket and records ingredient and packaging deductions together.

2 RECORDED STOCK LIFE

Printed or documented date evidence guides usable stock. Earlier limits and holds affect allocation.

DATE RECORDS HAVE LIMITS

They support stock planning. They do not detect contamination or guarantee physical food safety.

DESIGN & EVIDENCE

REACT
Customer and owner interfaces

DJANGO
Permissions, pricing and stock rules

POSTGRESQL / SUPABASE
Persistent application records

FUNCTIONAL CHECKS

- Dates, totals and one-time stock deduction.
- Access controls and payment-evidence rules.
- Daily summaries, sales and budget suggestions.

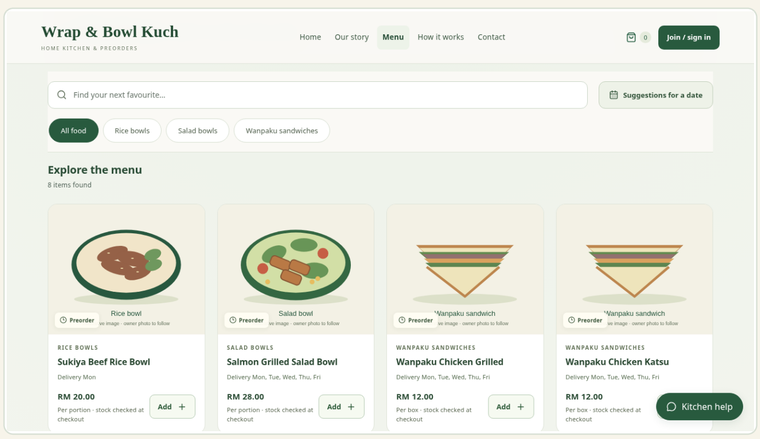

USER EVALUATION

Client follow-up and student feedback are planned. No survey scores or conversion gains are claimed.
